

New video series – ‘One Minute Wetlands’ – now available on DNREC’s YouTube Channel

DOVER – The new Delaware Wetlands video series, “One-Minute Wetlands,” premieres this week on DNREC’s YouTube Channel with two new videos: “[Free Ranging Marshes](#)” and “[Marsh Gas](#).” The series is produced by DNREC’s Division of Watershed Stewardship, Wetland Monitoring & Assessment Program, in conjunction with DNREC’s Public Affairs Office, and provides an intended grade school audience with a quick look into wetland hot topics and fun facts.

“Free Ranging Marshes” addresses marsh migration, the process of wetlands naturally creeping away from open water as sea levels rise. “Marsh Gas” offers a comical look at the chemical process behind that distinctive sulfur odor emanating from Delaware’s salt marshes – one of the most common questions the Wetland Monitoring & Assessment Program receives.

In addition to the “One Minute Wetlands” series, the DNREC YouTube Channel offers a wide variety of fun, interesting and educational videos, most of which are written and produced in-house by DNREC’s Public Affairs Office.

To view “Free Ranging Marshes,” “Marsh Gas,” and other DNREC YouTube Channel videos, please visit youtube.com/delawarednrec.
